

# The circulatory system

Monday 23<sup>rd</sup> March

1) Can you copy these statements about how the circulatory system works into the correct order?

- The oxygen in the blood provides fuel for the muscles and organs.
- The heart then pumps the oxygenated blood around the body.
- The lungs remove carbon dioxide from the blood and replace it with oxygen from the air we breathe.
- The blood returns to the heart to begin the cycle again.
- The heart pumps blood to the lungs.

2) Next can you copy the following diagram include the correct colour for the blood and label the diagram?

### Challenge questions:

How does oxygen enter the body?

How does waste gas get released from the lungs?

How does blood reach the heart?
